

# Capital-Free Baler Program

In keeping up with Rehrig Pacific Logistic's tradition of growth, service and innovation, RPL has created the Capital-Free Baler Program. This program allows customers to maximize the benefits of their recycled materials while avoiding the up-front cost of equipment.

## How the program works:

RPL covers the cost of the baler, as well as delivery, installation and training. You provide a level, solid, floor space and a power hookup. As compensation for the equipment, you provide RPL with the baled recyclables or a portion of the revenue from the recyclables. The revenue for the recyclable material(s) are allocated based on current market values. Each recyclable item is tracked using RPL's online asset tracking system, parts. When RPL has received enough recyclable material to cover the cost of the equipment, RPL will begin making direct payments to you for the recyclables we collect.

## Benefits of the program:

- Elimination of capital expenses for baling equipment
- Increase value of the materials you recycle
- Reduction of landfill waste and carbon footprint
- Help reach your recycling goals

In addition to the baler program, RPL can offer assistance with a wide array of recyclable materials including but not limited to:

- HDPE: barrels, drums, baled and loose material  
Plastic pallets
- LDPE stretch film
- PET strapping and bottles
- Scrap wood and wood pallets
- Office paper
